Your Water-treatment-device "VULCAN 5000" – 4 weeks testing period

Dear Mr. Christiani,

Following I would like to briefly explain to you our experiences with your water-treatment-equipment.

As here in Cadolzburg we have a hardness of the water of approximately 20° German hardness and being a health resort we consume more water than the average, we have always had scale-problems of any kind.

To get rid of this annoying problem, we already tried two different equipments from other producers, that work according a similar principle like yours and not seeing any success we removed them.

Therefore I was even more sceptic when I saw your simple equipment and watched how your employee installed it in a couple of minutes and without tools on our incoming pipe. But after a few days we already clearly noticed an improvement of the lime deposits. In places where before you had to remove the lime stains with cleaning agents, now there is just a powdery, easily removable "layer of chalk". And also the aerators and shower-heads show no more tendency to incrust.

Of course we will continue using VULCAN 5000 and enclose a corresponding check. I wish you a lot of luck for your future "convincing" of new clients and a lot of success for your company,

Yours sincerely,
